PHP Server-Side Scripting language for Website Development

PHP (Server-Side Scripting language)

PHP language stands for “**PHP: Hypertext Pre-processor**” The most widely-used, open-source, and script language. All PHP scripts are executed on the server.

Join the Indian Air Force

Indian Air Force is recruiting in flying, technical, technical branches. Apply now

DISHA by Indian Air Force

It can be run on different platforms like:

- Windows
- Linux
- Unix
- Mac OS X etc.

It is used for almost every server like

- Apache
- It also supports various types of databases.

PHP Syntax

PHP script starts with

```
<?php
```

**“In Trello we
trust”**

Sigr

Trello

Code written here...

```
?>
```

The extension for PHP files is **“.php”**. Normally a PHP FILE contains HTML tags, and some PHP scripting code. Below, there is an example of a code, with a PHP script that uses a built-in PHP function **“echo”** for print out the text “Script Language” on a web page:

Example

```
1 <!DOCTYPE html>
2 <html>
3 <body>
4 <h2>PHP Page</h2>
5 <?php
6 echo "Script Language";
7 ?>
8 </body>
9 </html>
```

Output

PHP Page

Script Language

Code	Comments
<html>	Starting with HTML tags
<h2></h2>	Head (heading 2)opening and closing of head
<?php	Starting php
echo	Built in function to print the text
?>	Closing of php

Pre-requisites to PHP

Before you start your learning with PHP, you must have a little basic understanding of HTML, CSS, and JavaScript.

Best PHP Frameworks For Web Development

1. Laravel
2. Phalcon
3. Fat-Free Framework
4. CodeIgniter
5. Laminas Project
6. CakePHP
7. FuelPHP
8. Slim
9. PHPixie
10. Symfony
11. Yii
